been able to begin shooting programs at the new range on mutually agreeable terms and conditions.

The first shooting events to be scheduled are the Bullseye League and the Winchester Program. The Bullseye League now can shoot at the range on Monday and Wednesday mornings at 10:00 am. Winchester can accommodate 10 shooters in a bay on Friday mornings at 10:00 am.

Shooters World asks that we fill all ten lanes with shooters or pay \$20 per hour per empty lane. Also, non-SW members must pay \$20 per hour.

The club has chosen to operate the event by charging \$20 for the reservations which is refunded if you show up for the scheduled event. When you show up, the club "shoot manager" refunds your \$20 at the event. If you do not show up, we pay the \$20 to SW for the empty lane.

For the Bullseye League, the refunds will be given at the end of the 10 events provided the member attends all 10 events. Refunds to Winchester and other future shooting events will be provided at the actual shooting event.

It's good to walk before we run in this new relationship. The new shooting events have gone very smoothly so far. We intend to continue these two events and gradually add more events.

Shooters World has preferred to provide the necessary RSO coverage for our events. We will be able to have qualified instructors there to assist any member needing help.

You may have noticed that we did not have targets available at the April meetings. While we are

## **The Ice is Melting!**

*By Terry Marksberry*

If you were able to attend one of the member meetings in April, you heard the good news that the ice is melting with Shooters World and the club.

Thanks to the persistent efforts of Roger Marksberry and Floyd Dunstan the club has now

working out more details in the VSS – SW relationship, we did not want to rock the boat.

We may buy targets for the future from SW or we may not depending on pricing and terms. In any case, we plan to provide targets to everyone participating in club shooting events like usual. Targets are provided at each event.

As we add additional events at SW the terms for reservations, refunds, etc. will likely be the same as we have currently established.

We can now support the success of Shooters World as we had hoped to do at the beginning.

**There's no such thing as a good gun. There's no such thing as a bad gun. A gun in the hands of a bad man is a dangerous thing. A gun in the hands of a good person is no danger to anyone except the bad guys. - Charlton Heston.**

## Cvent Activity Sign-Up System

*By Roger Marksberry*

The system is now up and running. In case you have not yet registered, here is how:

1. Go to the Activity Sign-up Tab on the club's website. Click once to open the Activity Sign-up page.
2. Click the one-time (blue text) registration link.
3. Enter your first and last name, and email address. Click NEXT for a couple more automated steps which will end with your **Confirmation Number**. Write/store this number and think of it as your new Cvent member number to make reservations.
4. To make a reservation, go to the Activity Sign-up tab and click on the event you want.
5. At the very top you will see [Click HERE to Add This Activity](#). [Click HERE](#) (on web site)

6. Click Add Activity

7. Enter your email address and confirmation number (or the original number you received in step 3.)

8. Making a reservation and Add More Activities

9. Review your profile and activity, select "I Agree" and NEXT.
10. Now you will see your activity as well as any other activity previously signed up for.

Friday, April 26, 2019

### MEETINGS & SEMINARS

Wednesday, April 17, 2019

11. Note that if the event is full, just click on the Capacity Full square box to be added to the wait list.
12. If you must cancel, sign in and go to the activity to click the "Unregister" square box.

That's it.

If you still need help or have questions, send an email to [reservations.sys@vssclub.org](mailto:reservations.sys@vssclub.org).

## Member Meeting Recap Guns of the Olde West & Movies II

---

By *Don Fraser*

(aka *FAST DRAW FRASER*)

Deputy Marshall Don Fraser reappeared for a second installment of Guns of the Old West and Hollywood for the April member meetings. Starting with black powder muzzle loading Hawken rifles, he explained how those large caliber, heavy rifles were used

extensively by fur trappers and mountain men in the early 1800s. The Hollywood tie-in was with the movie "Jeremiah Johnson" starring Robert Redford. Mr. Redford was probably a bit more dapper than the "real" Jeremiah Johnson, who made a name as a vengeful killer of Crow Indians. Next up was a group of large bore rifles designed by Christian Sharps beginning in 1850. A Sharps carbine, a falling block action weapon, was popular with both Union and Confederate troops - some 90,000 were produced. In 1874, the Sharps buffalo hunter rifle was introduced, typically in .50-90. This rifle had considerable long range, was accurate and deadly - with muzzle energy about six times that of a modern 9mm handgun. It was so effective in killing American bison, that by the late 1880's there were less than 100 in existence. Tom Selleck was the star in the 1990 movie "Quigley Down Under, but the best supporting actor was his specialized Sharps rifle. Fans of the very far west movie (Australia) started a special long-range shooting competition using Sharps rifles. This Matthew Quigley Buffalo Rifle Match is held yearly in Montana.

John Deringer built his first short barrel pistol in 1825, and short barreled pistols became very popular. The most notorious pistol he built was the single shot muzzle loading .44 caliber deringer used to assassinate President Lincoln. The gun remains on display at Ford's Theater in Washington, DC. Deringer didn't patent his design, so every major gun manufacturer began making small handguns and simply spelled their designs as Derringers - just adding an extra "r" in the name. Sharps made a four-barrel version called the pepperbox, and it was the version of small handgun used by Yancy Deringer in the popular TV show. Modern Derringers are being made by Bond Arms and are available in many different calibers.

Remington produced a number of very fine handguns beginning in the cap and ball era. One of their finest cartridge firing examples was the Remington 1890. Only 2,020 were produced, and they will fetch a fine price today, well above the \$10.70 you would have spent back in 1890. An engraved model of this pistol was presented to cowboy and Pinkerton detective Tom Horn. Steve McQueen starred in a 1980 movie about his life. Tom had a difficult time adjusting from Old West cowboy life to the new world of the 1900s. He was accused of the murder of a 14-year-old boy, tried, convicted, and hanged in 1901.

The Springfield 1873 Trapdoor was a breech loading single shot rifle that won a significant Army competition and contract. General Custer's 7th cavalry used them in the Battle of the Little Big Horn, but they were no match for the Henry repeating rifles used by many of the Native Americans. The Trapdoor was available in an infantry, cadet, and cavalry version, the main differences being in the length of the barrel. Along with John Wayne and Henry Fonda, the cavalry carbine was featured in the 1948 film Fort Apache. A grown-up Shirley Temple was the leading lady.

The Smith and Wesson Model Three was used worldwide by military and police groups. It was the first practical big bore cartridge revolver. Available in a few different calibers, it was unable to chamber

the .45 Long Colt, but a Colt could fire the ammo made for the Model Three. Because of this, the Colt eventually surpassed the Smith and Wesson for U.S. military use. A character called The Schofield Kid (named after the Schofield version of the Model 3) was featured in the 1992 movie "Unforgiven", a dark tale of vengeance starring Clint Eastwood, that won the Oscar for Best Picture.

Smith and Wesson presented Annie Oakley with a gold and silver version of their Model One handgun. Annie survived a difficult childhood to become a shooting star in Buffalo Bill's Wild West shows. She met her future husband, Frank Butler, at a sharpshooting competition. He was more than surprised to be bested by a female teenager. Annie is quoted as saying, "I would like to see every woman know how to handle firearms as naturally as they know how to handle babies."

Ned Buntline was the nom de plume of Edward Zane Carroll Judson, Sr. A prolific dime novelist, playwright, roué and cad, he is credited with creating the Wyatt Earp myth surrounding a very long barrel Colt pistol that became known as the Buntline Special. The truth may be such a gun was never produced by Colt, nor used by Wyatt Earp but it returns to haunt the truth in nearly every movie made about the Earp family or the gunfight at the OK Corral. Such a tale was the 1993 film "Tombstone" starring Kurt Russell as Wyatt Earp

and Val Kilmer as Doc Holliday. Although far from being historically accurate, the movie has plenty of action and memorable one-liners.

**"I have a very strict gun control policy: if there's a gun around, I want to be in control of it." - Clint Eastwood**

Fast Draw Fraser showing a Buntline with 12" barrel (rumored to also have made a 16" barrel). Now that should make our Bullseye participants jealous!

Adding immeasurably to the presentation were the Old West firearms brought in for view by Charley Beck.

Deputy Marshall Don rode off into the sunset, but you never know when he might return with more tall tales and true!

[\(Return to Top\)](#)

**Donor Appreciation Awards**

The April award was the Kimber Micro 9 Two Tone 9mm handgun with an aluminum frame and stainless-steel slide, 3.15" barrel and one 7 round magazine.

| Savannah winner  | Eisenhower winner   |
|--|---|
| Janis Husak  | John Lang   |
|  |  |

*Congratulations to Janis and John!*

## Next Meeting & Award

The **May** meeting topic will be Sumter SWAT Team & NRA Annual Meeting. This should be a very interesting meeting especially with the SWAT Commander.

**Savannah: Thur. May 9<sup>th</sup>**, 6:45 – 8:15 pm. Doors open at 6:00 pm.

**Eisenhower: Mon. May 27<sup>th</sup>**, 6:30 - 8:00 pm. Doors open at 5:30 pm.

The May meeting award will be a Mossberg Shockwave Shotgun. Click the link for specs.

Wow, not a handgun and what a gun!

### **Instructor's Corner**

**By Steve Mosel**

(These articles are the opinions of the writer only and in no way reflect official positions of The Villages Straight Shooters - or anyone with good sense for that matter - SM)

---

### **” LET’S HEAR IT FOR THE LONG GUN!”**

I’m basically a handgun guy. But long guns have always been a part of my shooting life. From learning to shoot with a .22 to M-14’s in the Army to the challenging fun of shooting American Trap with my crappy, entry-level shotgun, I’ve always loved them. Now, it turns out, I’ve come full circle and have re-discovered the joys of the .22 rifle under the banner of “precision rifle shooting”. I bought myself a Ruger Precision Rimfire, which effectively mimics the big-boy calibers and is a great training aid for those pursuits. We’re talking 50 or 100 yards here – not what the long-distance crowd is doing. Being a simple thinker who really hates doing all that math, I only

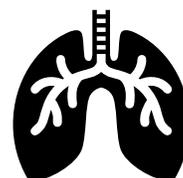

want to shoot at what my crosshairs claim I can hit. I want to do it the easy way, without having to

compensate for the vagaries of the wind, the way the earth is spinning or whatever else they fuss about. It sometimes feels like you need a degree from M.I.T. to decipher what those shooting at 1000 yards have to figure out. It’s a pretty sure bet that no wind meters or cell phone-compatible yardage calculators will be taking up space in my range bag anytime soon. When I can gather enough moolah to afford one of the many 6.5 Creedmoor beauties offered by almost all of the major rifle manufacturers these days, then I’ll consider stretching that yardage out considerably. (I secretly want to play sniper and knock off a prairie dog at two miles. But I guess some serious arithmetic might be involved for that shot– so forget it!)

So how does all this precision rifle work help with my handgun endeavors? It really shows its worth in at least two essential marksmanship skills: Breath and trigger control.

**BREATH CONTROL:** Now we’re not talking tactical shooting here. If you’re really serious about becoming good with a gun in more dire circumstances, you’ll need to take a course that pushes you to try to hit stuff while you’re breathing heavily after running 25 yards or so. Good luck! (Especially the running part at our age.) Nope. This is about pure marksmanship when you have time to line up all the elements just right. How you quiet your breathing so that it doesn’t negatively affect a shot can vary greatly with the individual. Some hold their breath until they shoot, but, as in anything, you can overdo it, creating even more movement by taking the breath too soon or just holding it too long. Look what happens when you hold your arms out in front of you for too long before firing.

You start to do the jiggle dance. Almost imperceptibly at first, but then it often begins to become exaggerated enough to affect the grouping and you end up with a flyer. (It really becomes apparent when looking through a red dot sight.) The same result can happen by letting the carbon dioxide levels build to troublesome levels by hanging on to a breath. Try, instead, to take the breath and let out a small amount of air to release the pressure. When I'm in a good shooting rhythm, I'll often squeeze off the shot while the air is still being released. It pays to experiment and find what works best for you. The time I spent on the air gun range helped me immeasurably in finding the best technique to manage my breath during a shot.

**TRIGGER CONTROL:** Assuming that your firearm is fitted properly for your hand (and that's a big assumption) and that your finger hits the trigger in an optimal spot (in the middle of the finger pad between the tip of the finger and the first joint), shooting precision rifle will make you ultra-alert to every nuance of the trigger squeeze. Letting the trigger do its work and surprise you when it goes off can be ideal. Don't let your brain "make" the trigger do anything. Just let it happen and there will usually be much less movement.

One important note: There can be many exceptions to the "ideal" finger position mentioned above. Owing numerous firearms will, by necessity, bring about all sorts of improvisations and compromises in where and how you place your trigger finger. I have a couple of revolvers that necessitate me using the first joint as the sweet spot, etc.). So, nothing's in stone. But the above-mentioned finger-pad position is an excellent place to begin. The size of your hands and length of your fingers will come into play as much as the design of a particular gun. If you've already spent your hard-earned dollars and own the gun, make it work or get rid of the blasted thing as it might not be right for you.

Have an instructor carefully evaluate what's going on with your trigger mechanics at the next club

shoot. It's as vital a part of marksmanship as there is.

You can get into precision shooting and the wildly popular sport of long-range competition at various price points. I think you'll be quite happy shooting the 100 yard, .22 LR bench rest competition at the Eustis Gun Club. They've recently started the matches and it's very well attended. Like me, you could start with a very decent rifle costing no more than a few hundred dollars. Just be warned that you'll probably end up tricking out the beast and making it your own. This becomes especially true when you consider the glass you put on top of the rifle. With the long-distance gang, this could run you into the thousands if you get carried away. But some excellent entry level scopes are available well below \$500.00. As to the rifles, the manufacturers I mentioned have offerings in the larger, flat-shooting caliber, precision genre that begin at a street price of just below a grand. To get that 100-yard guaranteed accuracy from an inch down to  $\frac{3}{4}$  of an inch will sometimes cost another thousand and to get it even more accurate, all bets are off. But you won't go wrong looking at Ruger or Mossberg or 20 other companies vying for your entry-level, long-range dollars. Generally, these are well-reviewed tools and are accurate enough for almost all shooters. Should you become an Olympic quality shooter, we will cheer you on and the Club will be oh so proud. (Based upon who my readers are, you will also no doubt break an age record for an Olympic athlete.)

So, gather all your financial records – as usual, hide your activities from your spouse – do your research on the kind of long gun that you think you'll have the most fun with and go for it. You probably didn't really need that operation anyway!

## Other Stuff

### Ladies Pistol Project 3

American Rifleman, 8 April 2019  
Ann Y. Smith, Sr. Executive Editor

You may remember that we reported on the NRA's American Rifleman project to evaluate what women want.

**Ladies Pistol Project (LPP) I** was reviewed in the September 2017 issue of this newsletter. LPP I assembled 35 women to test 17 handguns. As a recap, click the abbreviation to go online: [LPP I](#) ||| [LPP II](#) ||| [LPP III](#).

**LPP I:** Most of the women believed a revolver was just right for them.

- Fact: 34 picked a semi-auto pistol once they learned the push/pull slide technique
- Gun size didn't matter; tailor a gun to hand size.
- Fact: The results varied considerably. Some with small hands preferred a full size 1911 model. It's all about the grip and feel of the individual.
- The major parameters were placement of controls, ease of use, comfort and feel, and overall impression.
- The SIG Sauer P238 (.380 ACP) was the top choice followed by Walther CCP, Sig P320, H&K VP9 and Springfield EMP4 (the latter 4 were 9mm).

**LPP II** focused on concealed carry and reported here in the December 2017 issue. This time they assembled 55 women and increased the number of guns to 24. The results were categorized by small, medium and large hands, and then cumulative.

|  |   |
|--|---|
| Cumulative (all hand sizes):<br>1. Glock 19<br>2. SIG Sauer P238*<br>3. H&K VP9SK<br>4. Walther PPS M2 | Small hands:<br>1. SIG Sauer P238<br>2. Glock 19<br>3. Glock 43<br>4. Bersa BP9cc<br>5. Ruger LCP II* |
|--|---|

|   |  |
|---|--|
| 5. Glock 43   |  |
| Medium Hands:<br>1. Glock 19<br>2. Glock 43<br>3. Walther PPS M2<br>4. H&K VP9SK<br>5. SIG Sauer P238 | Large Hands<br>1. Glock 19<br>2. SIG Sauer P238<br>3. SIG Sauer P938<br>4. H&K VP9SK<br>5. Springfield XD-S 4" |

The Glock 19 had the highest average.

- Overall, the women had equal preference for placement of features on the Sig P238, Glock 19 and Sig 938.
- Ease of use favorite was the Glock 19
- Comfort and feel, S&W M&P Shield (Performance Center model) and Walther PK380
- Bottom line, the pistol most said they would buy, and carry is the Glock 19.
- Women preferred:
  - 9 mm over .380
  - Barrel length  $\geq$  3.25"
  - Gun weight of  $\geq$  20 oz
  - Striker-fired
  - Trigger pull between 6 and 7 lb.
  - Cost  $>$  \$500 (price was not revealed prior to testing)

And now **LPP III** which was the largest group of guns AND women participating. This round was overseen by a mother/daughter owner of a gun shop in Maryland. So, what happened?

The handguns chosen were to evaluate each as the ideal use for concealed carry, home defense, or both. The semi-autos were in 9mm and .380 ACP whereas the revolvers were .357 Mag/.38 Special. There were 68 women age 25 – 76, and 26 handguns. After firing each gun, they

had to complete an 18-question true/false survey. Accuracy was not the primary factor, rather how well the gun fit, felt, and functioned (slide lock & release, use of an external safety, magazine loading, and recoil management).

Let's get to it. The S&W M&P 380 Shield EZ won top honors! However, only by a slim margin over the Glock 19. In fact, 3 of the top 5 guns were Glocks (19, 42, and 43). See the point totals in the graphics below. The Shield EZ won even though there was general dislike of the grip safety; that is, all the other features of the gun overwhelmed this one strong dislike. A word of caution about using a grip safety gun for concealed carry is to make very sure you know how to disengage it before relying on it for self-defense.

Of the 26 guns, the mean (average) score was 14.639. Of these 13 guns, 4 were .380 ACP and the rest 9mm.

A pleasant surprise was seeing the women, even first-time shooters, loading their own magazines; something one must master for CC. Some mid-size semi-autos were hard to clear which means it is not the best choice. Finally, the authors note that if the study had focused ONLY on concealed carry, it is likely the Sig P365 would have scored higher.

BTW, this project began because women shooters and gun owners are the fastest growing demographic by as much as 50%.

The women have spoken!

The results (maximum score possible was 18.0):

| <u>Make &amp; Model</u>  | <u>Caliber</u> | <u>Score</u> |
|--------------------------|----------------|--------------|
| 1. S&W M&P 380 Shield EZ | .380 ACP       | 17.382       |
| 2. Glock 19 Gen5         | 9 mm Luger     | 16.940       |
| 3. SIG Sauer P238        | .380 ACP       | 16.508       |
| 4. Glock 42              | .380 ACP       | 16.323       |
| 5. Glock 17 Gen4         | 9 mm Luger     | 16.176       |
| 6. SIG Sauer P365        | 9 mm Luger     | 16.058       |
| 7. Glock 43              | 9 mm Luger     | 15.941       |
| 8. Ruger Security 9      | 9 mm Luger     | 15.691       |
| 9. SIG Sauer SP2022      | 9 mm Luger     | 15.617       |
| 10. Walther CCP M2       | 9 mm Luger     | 15.597       |
| 11. Remington RP9        | 9 mm Luger     | 15.367       |

|                            |                       |               |
|----------------------------|-----------------------|---------------|
| 12. Kimber Micro 9 CDP     | 9 mm Luger            | 15.147        |
| 13. Springfield 911        | .380 ACP              | 14.867        |
| 14. SIG Sauer P320         | 9 mm Luger            | 14.850        |
| 15. S&W M&P M2.0           | 9 mm Luger            | 14.470        |
| 16. Springfield XD-S Mod 2 | 9 mm Luger            | 14.343        |
| <b>17. Ruger GP100</b>     | <b>.357Mag/.38Spl</b> | <b>13.835</b> |
| 18. Ruger SR1911           | 9 mm Luger            | 13.820        |
| 19. Ruger EC9s             | 9 mm Luger            | 13.691        |
| 20. Chiappa Rhino          | .357Mag/.38Spl        | 13.601        |
| 21. Kimber K6s             | .357Mag/.38Spl        | 13.470        |

## U.S. Customs and Border Protection Going with Glock

American Rifleman Staff - Friday, April 12, 2019

The U.S. Customs and Border Protection (CBP) has awarded Glock an \$85 million order over the next 10 years to provide Glock pistols to law enforcement personnel. The **Glock 19, 26, and 47** in 9x19 will replace the HK P-2000 in .40-cal. Initial replacements should be complete by 2021.

The Glock 19 Gen5 MOS, Glock 26 Gen5 and new 47 will also have flared magwell for faster magazine changes, match-grade Glock Marksman Barrel (GMB) for better accuracy, and Ameriglo BOLD sights.

Read the whole story [here](#).

## Seminar Review & Schedule

---

### Gun Cleaning Gala

By Terry Marksberry

Well, we did it again! None of the Ruger Mark I, II, or IIIs went home in a box! However, it was a close call. We had one recalcitrant Mark II that finally succumbed to a hammer thanks to Ron Robiatelli.

The timing of our gun cleaning seminars is not an accident. We have them in April so seasonal residents can clean their guns before they lock them up for the summer. Then again in September, we have another session to clean the guns that got all gummy and gunky resting in the safe for 6 months before the fall/winter shooting events begin.

Seriously, whether you are a seasonal resident or not, cleaning your guns twice a year is a pretty good schedule. Even if you shoot a lot, guns do not need to be cleaned as often as in the past due to the newer clean burning powder and the non-corrosive primer chemistry.

Most handguns come apart easily for cleaning, but a few are stubborn. If you can remember, bring the owner's manual to the next cleaning seminar. We'd appreciate it.

Shoot often, shoot safely!

The next seminar is **Wed., May. 15<sup>th</sup>**, 2-3:30 pm, at the Eisenhower Rec Center. The topic will be **Rifle Optics & Scopes** via the Activity Sign-up sheet. This is ALREADY BOOKED FULL, but you can add your name to the wait list.

[\(Return to Top\)](#)

## Shooting Events

---

### Emeralda (Outdoor) & Schedule

- **Instructional Shoot:** This is for anyone who needs some help with grip, sighting, stance, etc. Extra instructors will be available. Shoots are the 1<sup>st</sup> & 4<sup>th</sup> Tuesday, and 1<sup>st</sup> & 3<sup>rd</sup> Friday of the month.

Currently May 3<sup>rd</sup>, 7<sup>th</sup>, 17<sup>th</sup>, 28<sup>th</sup> at 8:30 am

- **Steel Target Shoot:** this provides you with a chance to test your skills against others shooting a steel tree.

Currently May 14<sup>th</sup>, 21<sup>st</sup> at 8:30 am

### Shooters World at The Villages (SWV)

- **Bullseye Shooting League** for Rimfire and Centerfire Handgun. Sign-up via Activity sheet or if in mid-session, please contact Floyd Dunstan, email [dunsail2c@gmail.com](mailto:dunsail2c@gmail.com), for the details.
- Please note the change in location for Bullseye: now at Shooters World on Monday (Pistol Rimfire) and Wednesday (Centerfire) at 10:00 am. **All attending shooters MUST be at Shooters World front door by 10 am!!!**

### Winchester Shooting Schedule

Winchester shooting is now held on Friday each week at 10:00 am. Club Instructors will be on hand to assist. **NOTE:** this Shooters World Winchester session is **ONLY for Pro-Marksman, Expert, and Distinguished Expert.** All other levels must shoot on your own. **All attending shooters MUST be at Shooters World front door by 10 am!!!**

### Ocala Sportsman's (Outdoor)

**OSA** is the 4<sup>th</sup> Thursday of the month at the outdoor **Ocala Sportsman's Assoc.** range at 10 am only. Each date has a **handgun** and separate **rifle** range session.

**We must reject the idea that every time a law's broken, society is guilty rather than the lawbreaker. It is time to restore the American precept that each individual is accountable for his actions. – Ronald Reagan**

For April the Poker Shoot Off winner was James Bakey.

**Congratulation James!**

The next OSA shooting event is May 23<sup>rd</sup> at 10:00 am.
